NEW JERSEY SCIENCE CONVENTION 2020

Being a science educator has never been more challenging.
And science education has never been more important.

The only path back to relatively normal days lies in science.

The John Simon Instrument Company will continue to be a resource to science educators.
We are here to help foster science education and assist science educators.

To all our faithful customers, thank you for helping our business through these difficult times.

The John Simon Instrument Company looks forward to servicing and maintaining your microscopes.

We offer new microscopes for sale and trade in allowances for your old microscopes.

The John Simon Instrument Company is dedicated to helping science educators meet these new challenges of education.

John Simon is a charter exhibiter of the New Jersey Science Convention and has been presented with both The Atkins Award and The Thomas Fangman Award for his contributions to educational sciences.
